Education

Santa Clara University | BS in Computer Science and Engineering (Honors Program) | Tau Beta Pi Sept 2023 – June 2027

- GPA: 3.89 / 4.0
- **Relevant Coursework:** Machine Learning and Data Mining, Artificial Intelligence, Design and Analysis of Algorithm, Advanced Data Structure and Algorithms, Object Oriented Programming, Operating System, Software Engineering, Computer Networks, Computer Architecture

Experience

AI System and Prototyping Intern, Life in AI Center May 2026 – Present

- Engineered a reusable AI tutor/coaching platform using LLMs, RAG retrieval, learner modeling, skill tracking, adaptive feedback, and personalized recommendation logic.
- Designed shared platform services including session tracking, progress analytics, reflection workflows, recommendation engines, prompt libraries, and configurable learning paths.
- Optimized RAG workflows with semantic chunking, metadata tagging, source-grounded prompts, confidence checks, and hallucination fallback handling.
- Built mobile-first products with Figma Make, React Native, and Expo, supported by Git workflows, CI/CD build planning, QA testing, and TestFlight validation.

AI Research Intern, Santa Clara University March 2026 – Present

- Evaluated 4+ LLMs on media sourcing and annotation tasks using benchmark and human-labeled datasets, measuring accuracy, consistency, and alignment with annotation standards.
- Analyzed model outputs to measure accuracy, consistency, and alignment with annotation standards.
- Contributed to workflow design for LLM evaluation and benchmarking in journalism-related use cases.
- Tested 10+ prompting and evaluation strategies, contributing to more reliable model behavior and clearer annotation outcomes.
- Collaborated on technical research involving AI assessment, annotation pipelines, and benchmark development.

Data Research Intern, Alliance for Responsible Data Collection (ARDC) June 2025 – September 2025

- Researched **AI governance**, privacy, and **data ethics** to support responsible web data collection standards.
- Drafted policy briefs and regulatory responses; analyzed survey and research data on public internet data use.
- Contributed technical input on data standards and maintained structured research and documentation workflows.

Projects

Gastric Cancer Histopathology Classification (Hybrid CNN-ML Pipeline)

- Built a hybrid CNN-ML pipeline (ResNet50, SVM, XGBoost) for gastric cancer histopathology, achieving **79.24% multi-class** and **95% binary classification accuracy**.
- Reduced preprocessing time by **30%** through optimized patch extraction and normalization
- Visualized tumor microenvironments using heatmaps to reveal compositional differences between normal and cancerous tissues.

DataAlchemy (Multi-Agent AI/ML Orchestration Platform)

- Built a config-driven multi-agent AI/ML platform to automate data analysis, preprocessing, model training, evaluation, and reporting across end-to-end machine learning workflows.
- Designed a YAML-based agent configuration system that enabled dynamic task delegation, modular tool integration, and flexible orchestration without hardcoded pipelines.
- Integrated modular tooling and optional Docker runtime support to improve extensibility, isolation, and deployment readiness.

Technologies

Languages: C++, C, Python, JavaScript, Typescript

Frameworks & Libraries: FastAPI, React, Next.js, TensorFlow, Keras, Flask, Django, Node.js

Tools & Platforms: Docker, AWS, PostgreSQL, GitHub Actions, Git
